

01 Raw materials

Polystyrene is derived from virgin and recycled materials

02 EPS bead production

Steam expands polystyrene beads by a factor of 40; cooled, it becomes EPS foam

03 Conversion

Converters mould raw EPS—including used EPS—into packaging packaging and other products

100%
recyclable

98%
air

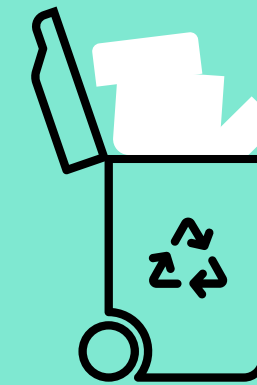

06 Recycling company

A recycler breaks up or melts down the EPS to make new material

05 Collection

Businesses or local governments collect and sort EPS for recycling

04 Use & Re-use

EPS packaging is used to protect all sorts of goods, sometimes over and over
