

# *This is how EPS COVID-19 vaccine shipping works – all at -70°C*

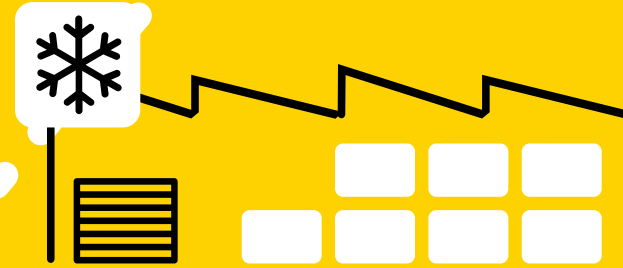

**5.000**

Doses per flight are brought to destination countries

## **Cold Storage**

Vaccines may need to be kept at -70°C for a few days before being delivered locally.

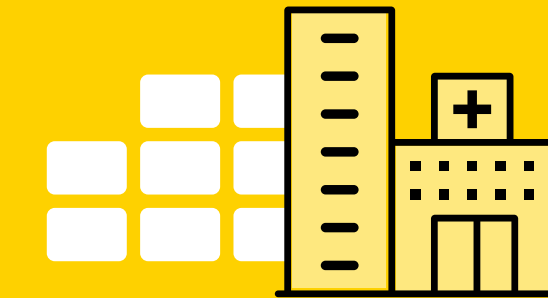

## **Vaccination**

It's only at the last minute that the vaccine is warmed up before people get their jab.

## **Delivery**

Refrigerated lorries take the EPS vaccine boxes from the distribution centre to medical centres.

## **Safe arrival**

Thanks to EPS packaging, the vaccines are kept cold all the way to the vaccination centre.
